The best thing you can do to prevent bugs from entering your home, is to fit each window with a net for keeping insects out of the house. These accessories turn a window into a bug barrier, one that is impenetrable to anything larger than a dust mite. Tired of wasp attacks and beetle infestations? A net may be the solution to your problems. Of course, there are other ways to keep unwanted visitors away: novelty bug zappers, that kill insects while looking fun and colourful, are an option for kids rooms. Alternatively, ensure that every window stays permanently closed!
